

## BitWise Touch App for iPhone, iPad and iPod Touch

The Bitwise Touch app utilizes Project Editor Software and the BC4X1 Pro Automation Controller to offer a complete solution to control audio video equipment. Features include:

- Works with iPad! – Screen sizes can be formed to fit the iPad. They are not “stretched”.
- Customizable Control Interface – The interface is only limited to your imagination. Import graphics from your own files, the Bitwise website or from a custom graphics shop.
- Individual look and feel – One person can have a simple control interface on an iPhone with just the buttons they use most commonly. The next person can have a more sophisticated control interface on an iPad with every command available tied to a button. The next person may chose to use their iPod Touch and have a variation of the two interfaces.
- Easy file uploads – Once your GUI is complete, simply click the upload command and open the app on the device you want the pages uploaded to.
- No Code Writing – Project Editor Software uses drop down menus for device set up, macro creation and to assign properties to control buttons.
- No Additional License Fees – upload the app to multiple devices with multiple pages without the need to pay additional fees.
